

CheetahXD 6.0

Offering advanced diagnostics with intuitive navigation, Cheetah XD 6.0 represents the next generation in network monitoring and management platforms. **New features include an intuitive summary screen, improved navigation, device specific data displays and actionable management information.**

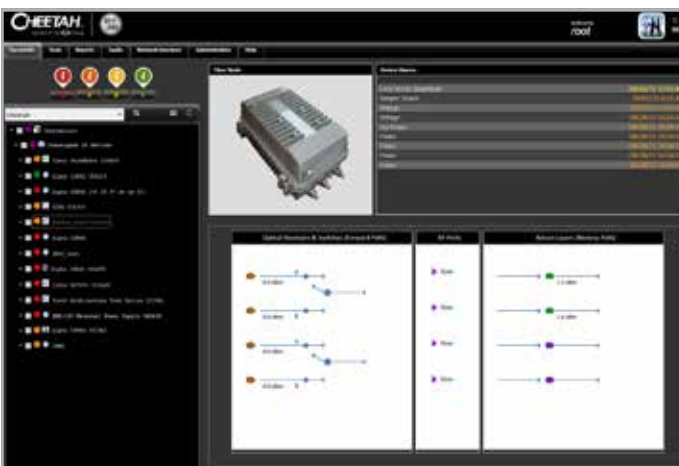

Summary Screen

The summary screens allow for easier identification of network issues by device type. Simple color coded status icons combined with critical graphical information on high-risk devices, makes it simple to pinpoint problems and deploy the proper fix agency.

Improved Navigation

Cheetah XD 6.0 places powerful management tools a click away by adding Quick icon links to value-added functions like XM3 Apps, KPI Scorecard, Battery Analyst, Power Outage Monitor, and Signal Analyst.

Device Specific Data Displays

Device specific data displays give key details for each unique device type that Cheetah XD can monitor.

Integral Tools for XM3 Intelligence

Vital information available through the Alpha XM3 power supply platform is now displayed, including Smart Alpha Guard status, Battery Runtime and Remaining Life Expectancy, and Estimated Monthly Utility Power usage.
