Tools and Materials Required

- Hand drill
- Center punch
- Pop rivet tool with 5/32" nose piece
- 4-foot level
- #20 drill bit
- Tape measure
- Masking tape
- Pencil
- Utility knife
- Vacuum to remove metal shavings from cabinet interior
- Lock, see Fig. 1 for dimensions

Installation

The installation outlined below applies to each of the supported enclosures. On all enclosures you must install side brackets and lock brackets. The side brackets hold the security bar, and the lock brackets hold the security lock. See Figs. 4 and 5.

B = 3/4"
C = 2 1/2"

WARNING!

A gas line runs behind the door jam on the 5K generator. Turn off the gas prior to installing the security bar. Be careful not to puncture or damage the line.

1. Using a 4-ft level and a pencil, mark the front of the enclosure where you want to place the top side brackets and bar. See recommended placement specifications available at www.alpha.com (P/N 745-847-C1-001). See Fig. 2.
2. Measure from the sides and mark the holes with a center punch. These will be the top holes used by the side brackets.
3. Remove the door.
4. Place cardboard behind the door jam to protect the electronic equipment from the metal shavings created during drilling. The cardboard deflects the shavings, and should be removed when the installation is complete.
5. Drill the holes using a #20 drill bit. See Fig 3.
Installing the Security Bar, continued

6. Line up the top hole of the side bracket with the hole drilled in the enclosure in Step 5. The side bracket provides a template for you to mark the bracket’s bottom hole locations.

7. Mark the bottom holes with the center punch.

8. Drill the bottom holes of the side bracket using a #20 drill bit. Repeat for the other side.

9. On the removed door (Step 3), measure and mark the top hole locations for the lock brackets. While you can use the side brackets and security bar to determine the drill location, the lock brackets are not horizontally aligned with the side brackets, but are offset.

10. Use a #20 drill bit to drill the holes.

11. Align the top hole of the lock bracket with the hole drilled in the door in Step 10. Using a center punch and the lock bracket as a template, mark the locations of the bottom hole.

12. Using a #20 drill bit, drill the bottom holes.

13. Rivet the side brackets and lock brackets to the enclosure and to the door. See Figs. 4 and 5.

14. Install the second bar, repeating the necessary steps.

15. Remove metal shavings.

16. Replace the door on the enclosure and insert and lock security bar into the brackets.

NOTE:
Where necessary, use the utility knife to cut and remove insulation from the rivet area.

DETAILED SPECIFICATIONS FOR EACH SUPPORTED ENCLOSURE ARE IN THE SECURITY BAR FIELD INSTALLATION MANUAL (SEARCH FOR P/N 745-847-C1-001) AVAILABLE AT WWW.ALPHA.COM.
